ECOBUST FOR ROCK & CONCRETE DEMOLITION

Ecobust, debuting at IBS 2012, is a brand new, innovative, environmentally friendly way of solving one of the construction industry's biggest challenges: rock and concrete demolition. Ecobust is a non-toxic powdered mixture of natural minerals designed to expand and exert thousands of PSI on rock or concrete combined with water. The product is available in four different types to guarantee performance reliability and allow custom purchases based on job size and the core temperature of the rock or concrete being demolished. Pail tops are color-coordinated to allow easy selection at the store. www.ecobust.ca or 888.509.2420
